

HP and TROY

## SECURE DOCUMENT PRINTING SOLUTION

## Help secure, simplify, and save by adding anti-fraud security features to your high-value documents before printing them on plain paper.

Many businesses expose their high-value documents—prescriptions, contracts, official documents, and certificates—to fraud through unauthorized photocopying, alteration, or counterfeiting. Plain paper documents are completely exposed to these types of fraud. Preprinted security paper offers some protection, but it's expensive and labor intensive. So why not just add security features to your print files before they're routed to the printer?

### Solution at a glance

The HP and TROY Secure Document Printing solution enables you to use your existing HP PCL5e LaserJet printers and MFPs—and plain paper—to print high-value, black-and-white documents with anti-fraud security features.

The server-based application lets you define settings for printing queues, adding anti-fraud features to print files before they are routed to the printer:

- **Copy-evident pantograph**—reveals a special pattern when any unauthorized copying or scanning occurs.
- **Variable data watermark**—prints unique user-defined data across the back of each document to protect against alteration.
- **MicroPrint optimized for laser printing**—reveals secondary authentication under simple magnification.
- **Intelligent warning box**—allows first line inspectors to easily verify document authenticity.

These anti fraud features meet or exceed requirements by the Center for Medicare and Medicaid Services (CMS) for measures to prevent copying, erasure, and counterfeiting on all paper-based prescriptions.

### Reduce costs and improve infrastructure

The HP and TROY Secure Document Printing solution can provide important operational benefits that save time and money:

- **Flexible server-based deployment**—enables installation on existing networks with PCL5e laser printers connected.
- **Plain paper printing**—reduces or eliminates dependency on expensive pre-printed security stock paper and the associated time spent tracking that paper and keeping it secure.
- **Workflow simplification**—streamlines the entire secure document print process, and eliminates the need for locking paper trays or dedicated security printers, along with the additional time required to manage them.
- **Certified by HP**—provides confidence in the quality and ease of implementation of the TROY solution.

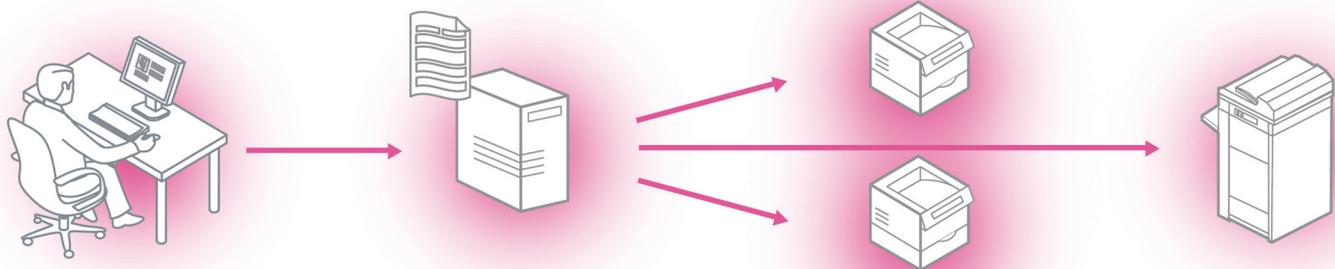

### What if you could...

**Save** your organization time and money by adding security features to high-value documents when printing on plain paper?

**Protect** your organization from loss, censure, or liability by adding proven fraud prevention features to your documents?

**Print** high-value documents with security features at a single location, or anywhere on the network using HP PCL5e LaserJet printing devices?

**Exceed** Center for Medicare and Medicaid Services (CMS) requirements for secure paper-based prescriptions?

1. Select a printer with a print queue configured for secure document printing.
2. HP and TROY Secure Document Printing Solution:
  - Receives the print file
  - Inserts selected security features into the print file
  - Routes job to designated laser printer
3. Pick up the reformatted document with secure features at the designated laser printer.

## Why HP and TROY?

HP is a global leader in imaging and printing solutions, and TROY is a world-class provider of check-printing security solutions. Our combined expertise allows our customers to benefit from reliable products and powerful solution sets.

**Reduce costs and improve your imaging and printing infrastructure.** Change the way you do business by changing the way you think about printing. Trim overall printing costs by investing in time- and money-saving solutions.

**Meet your business IT goals.** Extend the value of your imaging and printing hardware using solutions customized to meet specific needs. Trust HP and partner technology to handle even the most complex security, workflow, and document management issues.

**Choose from a wide variety of premier solutions.** Solutions are designed to work seamlessly with management tools.

## Get started today

When choosing HP solutions, rely on HP Solutions Certified Resellers—your trusted advisors. They have been trained to help you assess your business needs, install the solutions that can help enhance your organization’s effectiveness, and provide ongoing support.

Contact your local HP Solutions Certified Reseller for more information about the HP and TROY Secure Document Printing solution and other imaging and printing applications that will help you keep your business running smoothly.

## HP at work around the world

A major Southeastern U.S. healthcare system needed to securely issue prescriptions directly from its two electronic medical record (EMR) systems: one for its hospitals and another for its clinics. Secure printing across the entire printer network was vital to reduce the risk of fraud and meet stringent government regulations. The organization needed to print prescriptions on existing devices spread throughout multiple facilities. In addition, its clinic management selected small footprint laser printers—the HP LaserJet 2055—because of space constraints.

The HP and TROY Secure Document Printing solution was selected to meet this challenge. The unique flexibility of this software application allowed the IT staff to easily configure the desired print queues for secure prescription printing. Now the organization can print government-compliant prescriptions at any printer on the network, avoid unnecessary costs or complex logistics, and stay in compliance.

### Optimize infrastructure

HP can help you achieve a balance between your total cost of printing and your needs for user convenience and productivity.

### Manage environment

Working together, HP can help you maintain your optimized infrastructure while improving business efficiency and tightening security.

### Improve workflow

By streamlining your document-intensive processes, HP can help you deliver a more efficient environment for capturing, managing, and sharing information.
